Paul Haggerty , Krishnan Seetharaman
Communications of the ACM October 1998
Volume 41 Issue 10
- 2** Configuration maintenance for distributed applications management 80

Hanan L. Lutfiyya , Andrew D. Marshall , Michael A. Bauer , Patrick Martin , Wendy Powley
Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research November 1997

The MANDAS project has defined a layered architecture for the management of distributed applications. In this paper we examine a vertical slice of this architecture, namely the management applications and services related to configuration management. We introduce an information model which captures the configuration information for distributed applications and discuss a repository service based on the model. We define a set of services and management applications to support maintenance of config ...
- 3** Fast detection of communication patterns in distributed executions 80

Thomas Kunz , Michiel F. H. Seuren
Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research November 1997

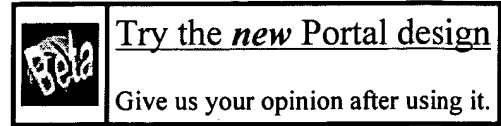

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...
